

Greaseproof Artwork – Helpful Hints

Please read the following hints prior to preparing your artwork:

- The template is a printing plate template (not a full sheet template)
- The printing plate will be wrapped around a print drum such that the end of the plate meets the top of the plate (forming a cylinder)
- As a result of the above, please ensure that your artwork forms a natural repeat from the bottom of the template to the top of the template. This will disguise the 2mm join where the bottom of the printing plate meets the top of the printing plate when it's wrapped around the print drum
- Please keep your completed artwork inside the dashed border of the template
- Use the outline tool to convert all text portions of the artwork to outlines to remove any font dependencies
- Please keep any fonts at 10 point or larger (3.4mm or larger)
- Please render your artwork using colours from the Pantone Uncoated Colour Library
- Please do not use jpeg or other raster files in your artwork. All artwork needs to be in VECTOR format
- Please don't flatten the document prior to saving it
- If your finished template is over 10MB, we have an FTP server available for file upload. Alternatively, please use one of the many file transfer sites available on the web (eg. <http://www.wetransfer.com>)
- You'll receive a soft proof to approve prior to production
